

Career Summary

David is a 13+ year veteran back-end developer. He has primarily worked with Java, but he is also proficient in Python and Golang. Microservices architecture is the ideal environment for David, as it is the most commonly used approach, especially under AWS.

David typically operates within agile methodologies, showing a keen interest in exploring new cloud technologies and applying his knowledge whenever possible. He enthusiastically states, *"I enjoy taking the lead and empowering my team to excel in the cloud."*

Currently David is studying the top trend technologies related to IA (LLMS, RAG, Agents and ML System design.) and working as a **fullstack** freelancer (React and TypeScript).

Summary of Qualifications

Lead skills			
Collaborated with Product Managers to define technical solutions aligned with business needs. Mentored team members, conducted code reviews, and promoted reusable architectures and best practices. Led refactoring, process improvements, and performance optimization initiatives. Managed team priorities, conflict resolution, workload planning, and delivery execution.			
Technologies		Arch Patterns	IDEs & other tools
- Java - Python - Golang - React - TypeScript - JavaScript - Spring Boot		- Restful - Web Services - Junit - Mockito - Jmockit - TDD - BDD	- GoF - Event Driven - Domain Driven - Design - MVC - Hexagonal - IntelliJ Idea - Cursor - Goland - Pycharm - Visual Studio C - STS - Postman
Code quality tools	IA tools	Databases	No sql
- Sonarqube - CheckStyle - FindBugs	- Github Copilot - Microsoft Copilot - Aws Bedrock - Cursor	- Sql server - Mysql - Oracle - Aws RDS - PostgreSql	- DynamoDB - MongoDB - Redis - Gemfire
Cloud technologies	Microservices frame	Queuing technologies	Build tools
- AWS - PCF - OpenShift	- Spring Boot - Dropwizard	- AWS SQS - Kafka - RabbitMQ	- Gradle - Maven - Ant
Ticketing tools	SCM	Container & orchestration	Service discovery tools
- Jira - Service now	- Git - SVN	- Docker - Kubernetes	- Eureka - Zookeeper
ORM	Code coverage tools		
Hibernate	Jacoco		

Languages

- Spanish (native speaker)
- English (advanced)

Career History

Freelance, Remote

Nov. 2025 – Now

Full-Stack Java / React / aws - Colegio Cima de Hidalgo

Nov 2025 - Now (occasional support)

- **Front**
- Principal owner of School payments system a React + TypeScript SPA for student enrollment, tuition payments, user administration, and operational reporting.
- Core React developer building modular, scalable client applications with Vite, Material UI (MUI), React Router, and reusable dashboard/detail-view patterns.
- Owner of payment workflows including payment creation, batch processing, receipt viewing (PDF)
- Developer of multiple entity management modules (CRUD, detail views, parent/guardian data) integrated with backend REST APIs.
- Security and platform owner implementing JWT-based authentication, route protection, error boundaries, and centralized API/error handling.
- **Back**
- Core backend developer building modular, scalable services with Spring Web, Spring Data JPA, MySQL, Lombok, and reusable CRUD/service patterns across controllers, DTOs, converters, and repositories.
- Security and platform contributor implementing JWT-based authentication, Spring Security filters, role/privilege-aware access, centralized exception handling, and standardized API responses.

Insulet, Tijuana - Remote

Oct. 2024 – Now

Sr Java dev & aws cloud engineer - Insulet

Oct 2024 - Now

- Feature lead,with end-to-end ownership of strategic product enhancements: from requirement gathering and architectural design to implementation, testing, performance optimization, and long-term maintenance
- Technical Mentor and couch for Jr developer, fostering growth through code reviews, pair programming, and architectural guidance.
- Core Java developer specializing in modular, scalable backend systems using Spring Boot and AWS-native micro services and lambdas.
- Infrastructure-as-Code contributor, supporting and extending AWS CloudFormation stacks for secure, compliant, and automated deployments.
- Principal owner of the Amazon MSK (Managed Streaming for Apache Kafka) cluster, responsible for configuration, scaling, monitoring, and consumer optimization across distributed services.

Globant, Cdmx - Remote

May. 2018 – Sep 2024

Sr Java developer - DirecTV

Jan 2024 - Sep 2024

- Designing and implementing various cloud components including Lambdas, microservices and ETL process.
- Transition existing Java services and data pipelines to cloud-based solutions.
- Offer support during software release cycles, ensuring smooth deployment and minimal downtime.
- Troubleshoot and resolve complex issues as part of Tier 3 support, enhancing system stability and performance.
- Develop comprehensive test suites, including unit, integration and functional tests, to validate software functionality and robustness.
- Engage in code reviews sessions, providing insightful feedback to peers and integrating suggestions for code improvement.
- Collaborate closely with the Team Lead and Application Owner to discuss system requirements and devise effective architectural strategies.

Java technical lead - Banco hipotecario de León (BHDL)

Jul 2021 - Nov 2023

- Coordinate back end team: assigning tasks, coaching, code reviews, clarifying requirements, translate high level requirements to low level, etc.
- Product managers interaction: identifying improvements, gathering requirements, proposing solution approaches, serving as the main point of contact of the team.
- Provide support to other backend teams in cross functional components.
- Team guide for achieving all commits in the sprint.
- Main point of contact with other integration teams and third party ones as well.
- Main developer and responsible for payment services.
- Member of the customer architecture board, proposing and discussing improvements and new solutions.
- Design, implement and maintain architecture solutions.

Senior java back end developer - Banco hipotecario de León

Oct. 2020 – May 2021

- Main developer of AWS lambdas integrators for third party services.
- Provide some help for other team members about their tasks.
- Responsible for some Micro services creation and maintenance related to proxy and data transformation.

- Multiple development tasks in other cross micro services.

Semi-senior java back end developer / Big data engineer Zaplabs May. 2018 – Oct. 2020

- Develop a testing framework which lets other developers create and run unit tests inNIFI pipelines.
- Create APIs using GO, GRPC and protocol buffers.
- Create ETL as scheduled jobs in AWS using Go.
- Create Postgres SQL queries.
- Create and design java Rest APIs.
- Create complete flows using aws components: Dynamo, Kinesis, Lambdas and API gateway.
- Active participation in architecture design sessions for new big data flows, mainly using aws features.

Softtek, CdMx, México

Jul. 2016 – May. 2018

Senior java developer CitiBanamex

- Distributed cache design, dev and support.
- Develop complex algorithms.
- Develop a web UI for managing a cache system.
- Design and develop Java APIs.
- Released 4 projects as owner application with microservices.
- Develop a sandbox environment to run infrastructure microservice components.
- Main contact interacting with global devOps / development teams.

Semi-senior java developer NBC Universal

Mar. 2016 – Jul. 2016

- Collaborate on Level 2 support for a payment administration system
- Refactor existing modules including datetime, billing, and user management
- Optimize SQL queries for improved performance
- Develop automated data reporting systems
- Provide user support as a help desk representative

Education

Universidad Tecnológica de Tulancingo, Tulancingo, Hidalgo, México Sep. 2009 – May. 2013 BS, Systems Engineering
